SWOT analysis

- SWOT analysis (or SWOT matrix) is a strategic planning technique used to help a person or organization identify strengths, weaknesses, opportunities, and threats related to business competition or project planning.
- It is very helpful during the preliminary stages of decision-making processes.
- It evaluates the **strategic position** of organizations.
- It identifies internal and external factors that are favorable and unfavorable to achieving business or project objectives.

SWOT Analysis

Internal Origin
Attributes of the organization

External Origin
Attributes of the environment

S Strengths	W Weaknesses	O Opportunities	T Threats
• Things your company does well • Qualities that separate you from your competitors • Internal resources such as skilled knowledgeable staff • Tangible assets as intellectual property, capital property, technology, etc.	• Things your company lacks • Things your competitors do better than you • Resource limitations • Unclear unique selling proposition	• Underserved markets for a specific product or service • Few competitors in your area of expertise • Emerging needs for your products or services • Press/media coverage of your company	• Emerging competitors • Changing regulatory environment • Negative media/press coverage • Changing customer attitudes toward your company

Helpful to achieving the objective

Harmful to achieving the objective

Helpful to achieving the objective

Harmful to achieving the objective

PESTEL analysis

- PESTEL analysis (political, economic, socio-cultural, technological, ecological, legal) describes a framework of macro-environmental factors used in the environmental scanning component of strategic management.
- It is part of an external analysis when conducting a **strategic analysis or doing market research** and gives an overview of the different macro-environmental factors to be taken into consideration.
- It is a strategic tool for understanding market growth or decline, business position, potential and direction for operations.
- **This tool is one of the most frequently applied models in the evaluation of the highly dynamic external business environment.**

PESTEL Analysis

P Political	E Economic	S Social	T Technological	E Ecological	L Legal
- Government policy - Political stability - Corruption - Foreign trade policy - Tax policy - Labour law - Trade restrictions	- Economic growth - Exchange rates - Interest rates - Inflation rates - Disposable income - Unemployment rates	- Population growth rate - Age distribution - Career attitudes - Safety emphasis - Health consciousness - Lifestyle attitudes - Cultural barriers	- Technology incentives - Level of innovation - Automation - R&D activity - Technological change - Technological awareness	- Weather - Climate - Environmental policies - Climate change - Pressures from NGO's	- Discrimination laws - Antitrust laws - Employment laws - Consumer protection laws - Copyright and patent laws - Health and safety laws

Cost / Benefit Analysis

- Cost–benefit analysis (CBA) is a systematic approach to estimating the strengths and weaknesses of alternatives used to determine options which provide the best approach to achieving benefits while preserving savings
- A CBA may be used to compare completed or potential courses of actions, or to estimate (or evaluate) the value against the cost of a decision, project, or policy.
- It is commonly used in commercial transactions, business or policy decisions, and project investments.

Cost / Benefit Analysis – cont'd

CBA has two main applications:

1. To determine if an investment (or decision) is sound, ascertaining if – and by how much – its benefits outweigh its costs.
2. To provide a basis for comparing investments (or decisions), comparing the total expected cost of each option with its total expected benefits.

Ref.: [SWOT analysis - Wikipedia](#)

Cost / Benefit Analysis – cont'd

- CBA is related to cost-effectiveness analysis.
- Benefits and costs in CBA are expressed in monetary terms and are adjusted for the time value of money;
- Benefits and costs over time are expressed in terms of their net present value (NPV), regardless of whether they are incurred at different times.
- The value of a cost–benefit analysis depends on the accuracy of the individual cost and benefit estimates.

Cost / Benefit Analysis – cont'd

Net Present Value

- CBA generally attempts to put all relevant costs and benefits on a common temporal footing, using time value of money calculations.
- This is often done by converting the future expected streams of costs (C) and benefits (B) into a present value amount with a discount rate (r):

$$NPV = \sum_{t=0}^{t=\infty} \frac{B_t - C_t}{(1+r)^t}$$

Business Pitch

Slides	Content
Title	Organization Name, your name, and title, and contact information.
Problem	Describe the pain you are alleviating. The goal is to get everyone nodding and buying in.
Solution	Explain how you alleviate the pain and the meaning that you make. Ensure that the audience clearly understands what you sell and your value proposition.
Business Model	Explain how you make money, who pays you, channels of distribution, your gross margin.
Competitive Analysis	Provide a complete view of the competitive landscape. Too much is better than too little.
Marketing Model	Explain how you are going to reach your customer and your marketing leverage points.
Sales Model	Ensure that the audience clearly understands what you sell and your value proposition.
Underlying Magic	Describe in detail the technology, secret sauce, or magic behind your product or service.
PoC/Demo	If possible, deliver a live demo of your product or service at this point.
Financial Projections and Key Metrics (KPIs)	Provide a 5-year forecast containing dollars and key metrics (#customers, conversion rate)
Management Team	Describe the key players of your management team, board of directors, advisors, investors.
