

Course: AASD 4017 - Presenting Data Science-driven Solutions

Project Type: Group Project

Project Theme: Building and Pitching a Business Case

In this project, your group will build a business case around a data-driven solution, either based on a project previously developed (e.g., from AASD 4016 or other courses) or a newly proposed idea. You will act as a team within a company that offers AI/ML-driven data analytics services. Your goal is to convince internal stakeholders (e.g., management, technical, and financial departments) to invest in your proposed solution.

Project Options:

You may choose one of the following directions:

Option 1: Build a Business Case for an Existing Project

- Use your project from AASD 4016 or another technical course (e.g., DL2) and frame it within a real-world business context. Show how this tool will benefit the company and justify the investment.

Option 2: Propose a New Tool or Solution

- Identify a need or opportunity and propose a new data-driven tool or product. This can be in any domain (healthcare, finance, logistics, etc.), but must be relevant to AI/ML or data analytics.

General Requirements

Assumptions:

Begin your report with clear assumptions, such as:

- What type of company you are part of.
- What problem/opportunity the business is facing.
- Whether a similar tool exists in the market.

Business Considerations:

- Is it better to build or buy the proposed solution?
- What are the costs, benefits, and risks of development?
- Who are the competitors, and is this a differentiator?

Use the Five Business Models (as discussed in class) and pitch templates as your foundation.

Deliverables

1. Final Report (Business Case Document)

- Due: Saturday (End of Day) following the last day of class
- Format: Word Document (.docx)

Your business case must include:

- Executive Summary
- Assumptions and Context
- Problem Statement and Opportunity
- Market Analysis
- Proposed Solution
- What it is, what it does, and how it addresses the problem.

- Build vs Buy analysis
- Financial Overview
- Cost estimation, revenue potential, ROI
- Stakeholder Analysis
- Risk Analysis
- Risk, impact level, likelihood, mitigation strategy
- Implementation Plan
- Timeline, milestones, team structure
- Conclusion and Recommendations

2. Final Presentation

- Dates: Tuesday and Thursday of the final week of class
- Duration: 10 minutes per group
- Audience: Framed as internal stakeholders and decision makers from various departments

Presentation should cover:

- Overview of the problem and opportunity
- Summary of the proposed solution
- Strategic fit and competitive advantage
- Business and financial impact
- Summary of key risks and recommendations

Note: Focus on the business perspective. It is acceptable to briefly mention technical outcomes to support your claims.

Team Guidelines

- Group Size: 4–8 members (flexible)
- Team Structure: One member must act as the Project Lead
 - Responsible for coordinating tasks, meetings, timelines, and final submissions
 - Must be clearly listed in the report and presentation

Workload Distribution:

- All members must contribute meaningfully
- Include a table at the end of the report showing roles and responsibilities

Final Submission Checklist

- Your final compressed submission (ZIP file) must include:
- Business Case Document (.docx)
- Presentation Slides (.pptx or PDF)
- Any visual materials or mockups used to support the proposal

Naming Convention:

GroupX_AASD4017_BusinessCase.zip (replace X with your group number)

Submit via Blackboard by one group member only.

Criterion	Poor	Good	Great	Amazing
-----------	------	------	-------	---------

Business Case & Problem Framing	Problem unclear or missing; no context or assumptions	Basic problem defined; assumptions vague or unsupported	Clear problem; relevant assumptions; some real-world framing	Strong problem framing with context and business relevance
Solution Justification & Business Fit	No solution logic or misaligned with business need	Solution loosely fits the problem; limited justification	Solution fits well; justified with basic benefits	Strong fit; supported by competitive or operational advantage
Use of Business Models & Analysis	Missing or misused frameworks; no analysis depth	One or two models applied; basic analysis	Relevant models applied; analysis mostly sound	Models used effectively; analysis insightful and well-integrated
Risk & Feasibility Assessment	No risk or feasibility analysis provided	Basic risks mentioned; no quantification or mitigation	Risks identified with probability and impact; some mitigations	Clear and thoughtful risk planning; realistic mitigation strategies
Financial & Stakeholder Considerations	Financials or stakeholder needs missing or unrealistic	Basic cost/revenue ideas; vague stakeholder impact	Clear budget/revenue; key stakeholders identified	Financials well structured; stakeholders addressed with impact
Report Structure & Clarity	Disorganized or missing major sections	All sections present but lacking clarity or depth	Organized and clear; includes all required elements	Well-written, detailed, and insightful
