

# SCHOOL OF COMPUTER TECHNOLOGY

AASD 4007  
Design Thinking for A.I. Solutions  
*Introduction*

Reza Moslemi, Ph.D., P.Eng.  
[reza.moslemi@georgebrown.ca](mailto:reza.moslemi@georgebrown.ca)

# Course outline

## Session 1:

- Introduction to design thinking
  - User research
  - Introduction to MURAL
- IBM Design Thinking Practitioner (2hr Course)

## Session 2:

- A1: Problem spaces and stakeholders
- Interview practice and expert Interviews
- A2: Interview questions & database ideas

## Session 3:

- User needs and AI intents (Empathy map, As-Is journey, user needs, AI Intents)
- A3: Personas

# Course outline (cont'd)

## Session 4:

- Prioritization and To-Be scenarios
- A4: To-be scenario and data sources (revisited)

## Session 5:

- Low-fidelity prototypes and testing
- A5: Low fidelity prototype and tasks

## Session 6:

- Projects

# Grading policy

- To pass the course student must receive a minimum of 50% of total mark.
- Participation involves both attendance and engagement in in-class activities.
- To receive marks for assignments, need to participate either in-person or online (70%).
- If participating in assignments online, it is student's responsibility to notify the instructor by email of their presence during the same session otherwise they will be marked as absent.
- Only the last submission is considered.
- Regarding Lab exercises that are required to be submitted during a session, late submissions will not be accepted. Lab exercises/attendance (Atklass) must be submitted strictly during the designated time window, otherwise they will not be considered. In case of any technical issues with accessing the course platforms, students must submit their work through email during the time window and prior to the deadline.
- The final grade is based on student performance on assignments/project as follows:

| Assessment Tool:    | Description:                                 | Date/Week:   | % of Final Grade: |
|---------------------|----------------------------------------------|--------------|-------------------|
| Participation       | In class participation in various activities | 1-4          | 10                |
| In-Class Activities | Workshop/Assignment                          | 1-4          | 30                |
| Assignments         | Homework assignments                         | 4            | 30                |
| Final Project       | Group projects                               | 4            | 30                |
|                     |                                              | <b>TOTAL</b> | <b>100%</b>       |

# Grading policy

| Assessment Tool:    | Description:                                 | Individual | Group | % of Grade: |
|---------------------|----------------------------------------------|------------|-------|-------------|
| Participation       | In class participation in various activities |            |       | 10          |
| In-Class Activities | IBM certificate                              | 5          |       | 30          |
|                     | In-class exercise 1                          |            | 5     |             |
|                     | In-class Exercise 2                          |            | 10    |             |
|                     | In-class Exercise 3                          |            | 10    |             |
| Assignments         | Assignment 1 (In-class)                      |            | 10    | 30          |
|                     | Assignment 2 (Homework)                      | 5          |       |             |
|                     | Assignment 3 (In-class)                      | 5          |       |             |
|                     | Assignment 4 (Homework)                      | 5          |       |             |
|                     | Assignment 5 (Homework)                      | 5          |       |             |
| Final Project       | Group projects/workshops                     |            |       | 30          |
