

Students must held a group discussion on these challenges which highlight various aspects of **Data Security and Data Privacy Governance Framework**. Define **1 Principle + 1 Policy** to address each privacy issue.

1 Challenge: Using product tagging and business intelligence tools for data governance.

Privacy Issue:

2 Challenge: Launching a self-service data governance framework for data analysis and task automation.

Privacy Issue:

3 Challenge: Consolidating disparate data sources and automating data tagging.

Privacy Issue:

4 Challenge: Using cloud-based data governance tools to consolidate data from multiple systems.

Privacy Issue:

5 Challenge: Managing data across global systems while ensuring data privacy.

Privacy Issue:

6 Challenge: Improving data lineage and role-based governance.

Privacy Issue:

7 Challenge: Implementing federated real-time queries and processing petabytes of data.

Privacy Issue:

8 Challenge: Using data tokenization and real-time monitoring for PCI DSS compliance.

Privacy Issue:

9 Challenge: Deploying a decentralized data mesh architecture for data tracking and auditing.

Privacy Issue:

10 Challenge: Centralizing data points and using low-code tools for data management.

Privacy Issue:
